Personal Website: antonykalokkwok.github.io | ORCID: 0009-0005-2540-4620 | Quincy, Massachusetts

Graduate researcher specializing in quantitative urban policy analysis, with a background in applied microeconomics, econometrics, macroeconomic modeling, and GIS. Research focuses on affordable housing, neighborhood socioeconomic inequality, transportation accessibility, environmental justice, and health equity. Experienced in causal inference, policy evaluation, spatial econometrics, and computational urban analytics, with ongoing research on Low-Income Housing Tax Credit (LIHTC) development, housing-market dynamics, and geographic information inequality. Languages: Cantonese (native); English, Mandarin, and Southern Min Hokkien (fluent)

EDUCATION

Tufts University, Medford, MA Expected May 2027
M.S. in Environmental Policy and Planning | Thesis in progress

Tufts University, Medford, MA Graduated May 2025
M.S. in Economics

University of Minnesota Twin Cities, Minneapolis, MN Graduated December 2023
B.S. in Econometrics and Quantitative Economics; B.A. in Mathematics; Minor in Statistics

RESEARCH INTERESTS

Urban and Housing Economics; Affordable Housing Policy; Spatial and Applied Econometrics; Transportation Accessibility and Equity; Spatial and Socioeconomic Inequality; Urban Informatics and Computational Urban Analytics; Environmental Justice and Health Policy; Economics of Education and Labor Economics; Food Policy and Accessibility

RESEARCH EXPERIENCE

Tufts University — Graduate Research Assistant
Professor Shomon Shamsuddin September 2025–Present

- Investigate Low-Income Housing Tax Credit (LIHTC) development, housing affordability, neighborhood change, and community health using HUD LIHTC records, ACS, CDC PLACES, HUD-USPS vacancy data, and spatial datasets.
- Construct and harmonize census-tract-level datasets to support housing policy evaluation, including staggered difference-in-differences, event-study, boundary-based, and spatial econometric research designs.
- Contribute to research on Medicaid expansion, housing stability, and financial security through empirical research design, data preparation, literature review, and statistical analysis.

Tufts University — Graduate Research Assistant
Professor Justin Hollander September 2025–Present

- Investigate digital urban inequality and the spatial distribution of geographic information in Wikipedia, examining how population and geographic characteristics relate to the representation of cities and other places.
- Analyze a dataset of 1,660,911 Wikipedia pages, filtered to 62,789 geographic entities using Wikidata classifications, including cities, towns, villages, human settlements, and administrative regions.
- Develop reproducible R workflows for large-scale data cleaning, geographic classification, population-data integration, descriptive statistics, and correlation analysis; identify a positive correlation between log population and log article length ($r \approx 0.46$).

RESEARCH IN PROGRESS

The Macroeconomic Effects of LIHTC Development: A Dynamic General-Equilibrium Analysis 2026–present
Master's Thesis | Advisor: Professor Shomon Shamsuddin

Developing a calibrated deterministic dynamic general-equilibrium model linking household consumption and saving, nonhousing production, private housing investment, and LIHTC-supported construction. Planned counterfactual simulations will examine the effects of affordable housing subsidies on rental prices, private construction, housing supply, aggregate consumption, and

investment. The empirical component will use HUD, ACS, Census, BEA, and BLS data, complemented by GIS analysis of LIHTC development patterns and neighborhood socioeconomic conditions.

What does Wikipedia say about Cities? Epistemology and Spatial Distribution in the World's Largest Encyclopedia
Collaborative Research | Professor Justin *Hollander* 2025–Present

Examining geographic disparities in Wikipedia's representation of cities and other places using 1,660,911 Wikipedia pages, including 62,789 place-related observations. Integrating Wikidata settlement classifications, population estimates, and geographic information to investigate differences in article coverage, information depth, and spatial representation across settlements and regions.

Spatial Inequalities in Bluebikes Accessibility: Affordable Housing, Transportation Disadvantage, and Urban Heat in Boston 2026–Present

Conference Research, AAG 2027 Accepted

Extending previous research on urban heat, neighborhood inequality, and bikeshare activity to investigate spatial disparities in Bluebikes accessibility near Low-Income Housing Tax Credit (LIHTC) developments in Boston. Integrating HUD LIHTC locations, Bluebikes stations, ACS socioeconomic indicators, and satellite-derived land surface temperature. Preliminary GIS and regression analyses identified 47 LIHTC census tracts with Bluebikes stations and 21 without. Planned extensions include pedestrian-network service areas, slope-adjusted least-cost paths, and spatial econometric analysis to evaluate transportation equity and accessibility for affordable housing residents.

CONFERENCE PRESENTATIONS

Urban Affairs Association (UAA) Annual Conference April 2027 — Accepted for Presentation

Hollander, J., & Kwok, A. "What does Wikipedia say about Cities? Epistemology and Spatial Distribution in the World's Largest Encyclopedia."
Coauthor; Professor Justin Hollander designated as primary presenter.

American Association of Geographers (AAG) Annual Meeting February 2027 — Accepted for Presentation

"Spatial Inequalities in Bluebikes Accessibility: Affordable Housing, Transportation Disadvantage, and Urban Heat in Boston."

American Association of Geographers (AAG) Annual Meeting March 20, 2026 | San Francisco, CA | Presented
"Mapping Urban Heat Inequality in Boston: Integrating Affordable Housing, Income, and Bluebikes Access."

SELECTED RESEARCH AND APPLIED PROJECTS

Housing and Transit Vulnerability in Grand Annecy Summer 2026

GIS 201: Introduction to GIS, ArcGIS StoryMap, Grand Annecy, France, Tufts University, Instructor: Professor Sumeeta Srinivasan

- Integrated French property transaction data (DVF+), SIBRA GTFS public transit schedules, and IRIS statistical boundaries to examine spatial disparities in housing prices and public transportation accessibility across Grand Annecy.
- Applied ArcGIS Pro spatial analysis, including housing price per square meter, 400-meter transit-stop accessibility buffers, nearest-stop distances, and weekday transit service frequency.
- Developed a composite housing–transit vulnerability index using raster reclassification, weighted overlay, and zonal statistics; applied Global and Local Moran's I to assess spatial clustering and identify vulnerability hotspots.
- Identified statistically significant positive spatial autocorrelation in the composite vulnerability index (Global Moran's $I = 0.627$, $z = 9.33$, $p < 0.001$), indicating that housing–transit vulnerability is geographically clustered rather than randomly distributed.

Spatial Analysis of LIHTC Development, Housing Affordability, and Tract-Level Health in Massachusetts

GIS 203: Spatial Statistics, Research Paper, Tufts University, Instructor: Professor Sumeeta Srinivasan Spring 2026

- Integrated HUD LIHTC property-level records, ACS socioeconomic and housing indicators, CDC PLACES health estimates, and Census TIGER/Line boundaries to construct Massachusetts census-tract datasets examining affordable housing, rent burden, and neighborhood health.

- Applied exploratory spatial data analysis (ESDA), Local Moran's I (LISA), cross-sectional OLS, residual spatial autocorrelation tests, and geographically weighted regression (GWR) to examine LIHTC clustering and spatial heterogeneity across six neighborhood health outcomes.
- Found positive tract-level associations between LIHTC concentration and high blood pressure ($\beta = 0.465$, $p = 0.0094$) and diabetes prevalence. Identified significant residual spatial autocorrelation (Moran's $I = 0.274$, $p < 0.01$) and geographic heterogeneity, with GWR demonstrating higher in-sample model fit ($R^2 = 0.871$ versus 0.696 for OLS).
- Conducted an exploratory two-way fixed-effects Difference-in-Differences (DiD) analysis of LIHTC development timing and rent burden, finding no statistically significant post-development change ($\beta = 0.0122$, $p = 0.413$).

Spatial Analysis of LIHTC, Housing Affordability, and Health Spring 2026

GIS 203: Spatial Statistics, ArcGIS StoryMap, Interactive GIS Visualization, Tufts University, Instructor: Professor Sumeeta Srinivasan

- Developed an interactive ArcGIS StoryMap illustrating the spatial distribution of LIHTC developments, housing affordability, and neighborhood health conditions across Massachusetts.
- Applied thematic mapping, Local Moran's I (LISA), and geographically weighted regression (GWR) visualizations to identify localized clusters, spatial outliers, and geographic variation in LIHTC–health associations.
- Identified uneven concentrations of LIHTC developments and neighborhood health disparities across Massachusetts, with stronger positive local associations between LIHTC intensity and high blood pressure in parts of Central and Western Massachusetts and weaker or negative associations in Greater Boston.

Bluebikes Access, Affordable Housing, and Heat Inequality in Boston Spring 2026

UEP 173: Transportation Planning, Tufts University, Instructor: Professor Shan Jiang

- Integrated HUD LIHTC property locations, Bluebikes station and trip records, ACS socioeconomic indicators, land surface temperature, and ERA5 climate data to examine transportation accessibility and heat inequality across Boston census tracts.
- Conducted GIS-based spatial joins, proximity analysis, and mapping to identify disparities in Bluebikes station accessibility among affordable housing communities.
- Estimated four regression models: (1) logistic regression of Bluebikes station presence; (2) OLS of land surface temperature and neighborhood socioeconomic characteristics; (3) tract fixed-effects regression of temperature-related ridership and station access; and (4) OLS of nearest-station distance within LIHTC tracts.
- Identified 47 LIHTC census tracts with Bluebikes stations and 21 without. Found that station access was associated with a stronger positive relationship between temperature and ridership among LIHTC tracts ($\beta \approx 9.92$, $p < 0.001$), with additional spatial disparities in station proximity by neighborhood characteristics.

Advancing Environmental Justice in Boston's Chinatown: Evaluation and Strategies for Just Energy Transition and Resilient Open Space Spring 2026

UEP 255: Field Projects, Tufts University, Instructor: Professor Penn Loh

Collaborative Research Project — Community Partner: Chinatown Community Land Trust (CCLT)

- Collaborated with a graduate research team and the Chinatown Community Land Trust to evaluate environmental justice challenges and strategies for equitable energy transitions and resilient open space in Boston's Chinatown.
- Designed Cantonese-language survey questionnaires and interview protocols to facilitate engagement with Cantonese-speaking residents.
- Conducted resident interviews in Cantonese, gathering qualitative information to inform community-centered planning and policy recommendations.
- Contributed to stakeholder engagement, qualitative data collection, and policy analysis supporting the team's environmental justice research.

Mapping Urban Heat Inequality in Boston: Integrating Affordable Housing, Income, and Bluebikes Access Fall 2025

UEP 237: Urban Analytics, Tufts University, Instructor: Professor Shan Jiang

- Constructed a Boston census-tract-by-month panel integrating ERA5-Land temperature, Bluebikes trip records, HUD LIHTC developments, ACS socioeconomic indicators, and tree-canopy measures to investigate urban heat, affordable housing, and transportation inequality.

- Conducted GIS-based spatial analysis and origin–destination (OD) flow mapping using kepler.gl to examine the geographic distribution of heat vulnerability, affordable housing, and bikeshare activity across Boston neighborhoods.
- Estimated tract fixed-effects panel regression, pooled OLS with socioeconomic controls, and interaction models to examine temperature-related ridership and neighborhood heterogeneity; applied exploratory geographically weighted regression (GWR) to assess spatial variation.
- Found that a 1°C increase in county-average monthly temperature was associated with approximately 7.2 additional Bluebikes trips per 1,000 residents within the same census tract ($p < 0.01$). Identified a weaker temperature–ridership association in neighborhoods with higher minority population shares (interaction $\beta \approx -5.04$, $p < 0.05$).

Does Gender and Marital Status Affect Workplace Inequality? Spring 2025

EC 202: Econometrics, Tufts University, Instructor: Professor Matthew Gudgeon

- Analyzed China Family Panel Studies (CFPS) data from 2010–2022, with approximately 149,000 regression observations, to examine gender and marital-status disparities in real annual earnings.
- Estimated high-dimensional fixed-effects (HDFE) regressions with year and county fixed effects, individual-clustered standard errors, gender–marital status interaction terms, and urban–rural subsample analyses.
- Found a substantial female earnings disadvantage in the baseline model ($\beta = -9{,}037$ RMB, $p < 0.01$), with an additional negative female–marital status interaction ($\beta = -2{,}458$ RMB, $p < 0.01$), indicating wider gender earnings disparities among individuals with a history of marriage.
- Identified stronger negative gender–marital status associations in urban than rural areas ($\beta = -3{,}929$ versus $-2{,}299$ RMB, both $p < 0.01$), highlighting geographic heterogeneity in labor-market inequality.

School Financial Reform and Income Inequality Spring 2025

EC 144: Income Inequality, Tufts University, Instructor: Professor Elizabeth Setren

- Constructed a U.S. state-year panel comprising 1,010 observations from 1990–2018, integrating Census and school-finance data to investigate the relationship between school-finance reforms and average household income.
- Applied Difference-in-Differences (DiD) using reform-state and post-2000 indicators, with demographic and socioeconomic controls; examined pre-treatment income trends and conducted placebo tests.
- Implemented propensity score matching combined with Difference-in-Differences (PSM-DiD) to assess the sensitivity of estimates to observable differences between reform and comparison states.
- Found approximately 2.6% lower average household income in reform states relative to comparison states during the post-2000 period ($\beta = -0.0259$, $p < 0.01$), with a similar negative estimate after matching ($\beta = -0.0226$, $p < 0.01$). Interpreted findings cautiously because reform adoption dates varied across states.

Construction of $\mathbb{R}$ Using Cauchy Sequences of Rational Numbers Fall 2024

MATH 135: Real Analysis I, Tufts University, Instructor: Professor Nima Hoda

- Constructed the real number system ($\mathbb{R}$) through equivalence classes of Cauchy sequences of rational numbers ($\mathbb{Q}$), defining two sequences as equivalent when their difference converges to zero.
- Proved reflexivity, symmetry, and transitivity of the equivalence relation using limit properties, the triangle inequality, and ε–N arguments; examined the well-definedness of addition and multiplication on equivalence classes.
- Developed a proof of the Archimedean property of $\mathbb{R}$ by contradiction, using the boundedness of Cauchy sequences and the Archimedean property of $\mathbb{Q}$; established the density of rational numbers in $\mathbb{R}$ through rational approximations and convergence arguments.
- Investigated completeness through a diagonal-sequence construction intended to show how Cauchy sequences of real numbers admit limits within the constructed number system.

Introduction to Markov Chains and Stochastic Decision-Making Fall 2023

Math 4997W: Senior Project (Writing Intensive), University of Minnesota–Twin Cities, Supervisor: Professor Sergey Bobkov

- Analyzed discrete- and continuous-time Markov chains using transition probability matrices, transition-rate matrices, stationary distributions, and recurrence-time calculations to model stochastic systems.
- Applied absorbing Markov-chain methods to a manufacturing process, deriving an approximately 18.25% probability of scrapping a part entering the initial production stage.
- Solved a light-bulb replacement model using stationary distributions and mean recurrence times, calculating that exactly one bulb operates approximately 28.17% of the time and that the expected interval between replacements is 71 days.
- Derived asymptotic expressions for the coupon collector problem using geometric waiting times, obtaining expected collection time of approximately $N \log(N)$ and variance of approximately $(\pi^2/6)N^2$; examined positive recurrence and continuous-time inventory and queueing applications.

Income Inequality and Economic Growth: A Cross-Country Analysis Fall 2021

ECON 4331W: Economic Development, University of Minnesota–Twin Cities, Instructor: Jacob Strauss

- Analyzed World Bank indicators of GDP per capita growth, income inequality (Gini coefficient), adjusted net national income, labor force, and education expenditure, including comparative time-series analysis of the United States and China from 2001–2020.
- Estimated a multivariable linear regression of GDP per capita growth on the Gini coefficient and country income-group indicators (high-, middle-, and low-income), using 1,310 observations; examined residuals, normal Q–Q plots, leverage, and scale-location diagnostics.
- Found a statistically significant negative association between income inequality and GDP per capita growth ($\beta = -0.069$, $SE = 0.014$, $p < 0.01$), while acknowledging limited model fit ($R^2 = 0.057$) and potential endogeneity.
- Compared U.S. and Chinese economic trajectories, documenting higher GDP per capita growth in China over the study period and differing Gini-index trends; discussed the potential roles of education investment, labor-force characteristics, and income distribution.

TEACHING EXPERIENCE

Tufts University — Teaching Assistant Fall 2026

MATH 134: Introduction to Analysis (Senior-Level Undergraduate), Professor Kathryn Beck

- Lead weekly recitations covering mathematical concepts, proof-based problem solving, and exercises; guide students through rigorous reasoning and mathematical arguments.
- Grade homework and written proofs, provide individualized feedback on mathematical correctness and justification, and hold office hours to support exam preparation.

Tufts University — Teaching Assistant Fall 2026

GIS 112: Programming with R (Undergraduate and Graduate), Dr. Ryan Veiga

- Supported R programming instruction through classroom coding demonstrations and hands-on exercises, including data import, file-path configuration, and debugging.
- Hold office hours to provide individualized assistance with R programming, data analysis, regression modeling, and troubleshooting coding assignments.

Tufts University StAAR Center — Graduate Tutor January 2026–Present

Economics and Statistics for Undergraduate, Master's, and PhD Students

- Provide individualized tutoring in economic theory, statistics, econometrics, and quantitative research methods.
- Guide students through mathematical reasoning, statistical inference, quantitative problem solving, and the application of econometric methods to coursework and research.

Tufts University — Learning Assistant Spring 2026

UEP 251: Economics for Planning and Policy Analysis (Graduate), Professor Jing Ren

- Supported graduate-level instruction in economic theory, policy analysis, and quantitative methods relevant to urban planning and public policy.
- Assisted students with economic reasoning, quantitative exercises, and the application of economic concepts to planning and policy problems.

Tufts University StAAR Center — Academic Note-Taker Spring–Fall 2026

UEP 173: Transportation Planning (Spring 2026), Professor Shan Jiang; UEP 243: Designing a Thesis (Fall 2026), Professor Shan Jiang

- Prepared and uploaded structured lecture notes through the Tufts accommodation system to support students receiving academic accommodations.
- Documented course concepts, research methods, and classroom discussions to improve accessibility and support student learning.

Tufts University — Grader (Two Sections) Fall 2025

EC 150: Financial Economics (Undergraduate), Professor Christopher McHugh

- Graded all exams and assignments across two course sections, assessing students' understanding of financial economics, quantitative calculations, and economic reasoning.
- Applied grading rubrics consistently and provided written feedback on conceptual errors, analytical methods, and problem-solving approaches

Tufts University — Teaching Assistant Fall 2024–Spring 2025

EC 5: Principles of Economics (Introductory Undergraduate), Professor Sergio Turner

- Led weekly recitations, office hours, and exam-review sessions for approximately 200 students per semester, covering introductory microeconomics, macroeconomics, and applied economic-policy topics.
- Prepared instructional materials, graded exams and assignments, and evaluated students' application of economic concepts to contemporary policy questions.
- Received student teaching evaluations of 4.63/5 for willingness to help and 4.00/5 for overall teaching ability in Fall 2024, improving to 4.67/5 and 4.33/5, respectively, in Spring 2025.

HONORS, AWARDS, CERTIFICATIONS, AND ACTIVITIES

2026 Tufts GIS Expo — GIS Award Finalist (Advanced StoryMaps) Summer 2026

Spatial Analysis of LIHTC, Housing Affordability, and Health

Chinese Culture AI Agent (华花) — AI Chatbot Application Fall 2026

Independent Technical Project — Hugging Face Spaces

- Developed and deployed an interactive AI chatbot for Chinese cultural education using Hugging Face Spaces and external AI API integration.
- Designed a bilingual Chinese–English interface to facilitate interactive exploration of Chinese cultural topics.
- Planned extension: Integrate Wikipedia and Wikidata geographic datasets to explore AI-assisted information retrieval and applications in urban planning and computational urban analytics.

Dean's List, University of Minnesota–Twin Cities Fall 2023

Unibit App — Co-Founder and Chief Marketing Officer October 2021–February 2022

- Co-founded and helped launch a social-media application on the Apple App Store.
- Led marketing, product positioning, and outreach initiatives to support the application's launch and user acquisition.

City & Guilds — International Award in Barista Skills, Merit December 23, 2015

Construction Industry Safety Training Certificate, Hong Kong Human Resources Ltd. October 25, 2015

Hong Kong Karate Team, National Team Member 2008–2014

- Selected for the Hong Kong karate national team and participated in extensive training and domestic and international competitions.
- Represented Hong Kong at junior and senior competitive levels, achieving placements in international and regional karate competitions.

Certificate of Volunteer Service 2013–2014

- Completed more than 30 hours of anti-drug community volunteer service.

Third Place (Junior and Senior Teams), 9th Korea Open International Karatedo Championships 2013

Third Place (Junior Team), Hong Kong Karate Kata Team Tournament Championships 2013

First Runner-Up, Boys Grade A High Jump, School Sports Day 2013

Second Runner-Up, Boys Grade A Shot Put, School Sports Day 2013

Winner, 6th Karate Friendship Competition 2012

Second Runner-Up, Group Presentation Competition, Shenzhen Economic Zone Study Visit 2011–2012

- Awarded Second Runner-Up in a group presentation competition during a school-organized study visit to the Shenzhen Economic Zone.

Career-Related Visits and Study Program 2011–2012

- Participated in school-organized cultural study programs and career-related visits to the North District Lunar New Year Fair Auction, New Choi Yen Village, Shenzhen Economic Zone, Hang Seng Management College, and Taipei.

TECHNICAL SKILLS AND LANGUAGES

Programming and data: R, Stata, Python, MATLAB, Dynare; Hugging Face (Datasets, Spaces), AI chatbot development, API integration, Excel, GitHub, Jupyter, Google Colab, LaTeX

Geographic analysis: ArcGIS Pro, ArcGIS StoryMaps, QGIS, CARTO, Kepler.gl; SQL (ArcGIS Pro attribute queries), spatial joins, network accessibility analysis, least-cost paths, raster analysis, weighted overlay, zonal statistics

Econometric and spatial methods: Panel-data regression, OLS, logistic regression, difference-in-differences (DiD), event studies, propensity score matching (PSM-DiD), two-way and high-dimensional fixed effects (TWFE/HDFE), instrumental variables (IV/2SLS), regression discontinuity (RD), spatial econometrics, Global and Local Moran's I (LISA), geographically weighted regression (GWR)

Macroeconomic and stochastic modeling: Dynamic general-equilibrium modeling (thesis in progress), Real Business Cycle (RBC) models, New Keynesian models, dynamic programming (Bellman equations), discrete- and continuous-time Markov chains

Languages: Cantonese (native); English, Mandarin, and Southern Min Hokkien (fluent)

ACADEMIC SERVICE AND LEADERSHIP

Tufts University — American Planning Association (APA) Student Liaison Spring 2026 - Present

Participated in APA student organization coordination, advising on student engagement, networking, and regional collaboration.

University of Minnesota — Statistics Club 2023

Public Relations Officer; organized networking, professional-development, and career events.

University of Minnesota — UNICEF Student Organization 2023

Public Relations Officer; coordinated fundraising and community-service initiatives.

University of Minnesota — Society of Asian Scientists and Engineers (SASE) 2022–2023

Corporate Relations Officer; organized employer presentations, career workshops, and networking events.

University of Minnesota — Economics Undergraduate Student Board (EUSB) 2022–2023

Marketing Officer; organized economics events and faculty-student research discussions.

University of Minnesota — Economics Mentorship Program (EMP) 2021–2022

Mentor to undergraduate economics students on course selection and academic planning.

University of Minnesota — International Student Ambassador (ISA) 2021–2022

Supported prospective and incoming international students through advising and events.

University of Minnesota — Chinese American Student Association (CASA) 2021

Organized cultural and community-building activities, including a Lunar New Year celebration attended by approximately 500 participants and a student retreat for approximately 30 participants.

ADDITIONAL PROFESSIONAL EXPERIENCE

Coutudi Corp — Marketing Specialist January 2024 – August 2024

- Gained experience in apparel-industry operations, including product development, inventory management, and production processes.
- Assisted senior staff with inventory organization, production activities, and daily operational tasks.

Sun Yat Fung Limited, Hong Kong — Marketing Specialist January 2015 – January 2016

- Supported marketing strategies, online sales, product selection, and customer-oriented business operations.
- Assisted with team coordination, inventory management, and warehouse storage operations.

Danny Catering Service Limited, Hong Kong — Assistant Chef October 2014 – December 2014

- Prepared and cooked meals for thousands of primary and secondary school students across multiple schools.
- Collaborated with kitchen staff to support large-scale meal production, food preparation, and daily catering operations.

FedEx and DHL, Hong Kong — Airport Cargo Agent July 2014–September 2014

- Handled incoming and outgoing shipments, including receiving, sorting, transferring, and processing packages and documents.
- Organized and loaded shipments into cargo containers for air transportation.
- Used forklifts to move loaded cargo containers within storage facilities and position them at designated collection points for authorized airport personnel.
